## Linear extrusion products

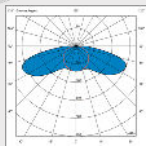

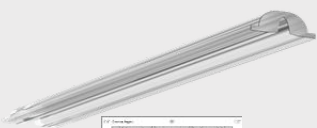

**SPICA and FIDIS, Two optics, Two effects !**

**Precision linear optics for office and architectural lighting.**

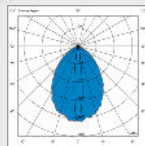

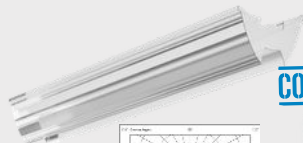

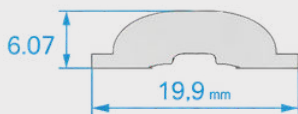

**SPICA** and **FIDIS** are GAGGIONE's first slim, slide-in linear extruded optics, created for designers who shape spaces with light. Sharing the same optical philosophy and LED platform, they deliver two complementary architectural effects: **wide, comfortable uplight/batwing ( $145^\circ$ )** and **razor-sharp wall grazing beam (FWHM  $12^\circ \times 75^\circ$ )** inspired by Gaggione's renowned LLL15N7 linear RGBW silicone optic. Extruded lenses come in a standard length of 1200 mm (4ft) and can be easily cut to the desired length.

**More unique beams coming soon!**

Both SPICA and FIDIS are optimized for **2835 and 3030 mid-power LEDs**, achieving a **typical LOR >85%** with outstanding uniformity, high efficiency and effortless integration into modern linear luminaires. Thanks to a mildly diffused optical design, FIDIS is also well suited for **RGBW color-mixing applications**, echoing the performance approach of the LLL15N7.

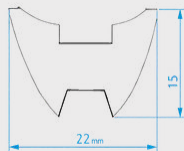

**SPICA**

**FIDIS**

**COMING SOON**

# SPICA Batwing

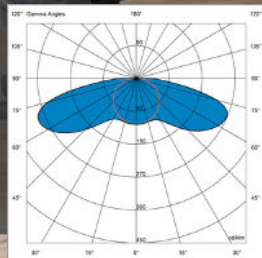

Turn dark ceilings into interesting ones.

This 20 mm wide, multipurpose co-extruded PMMA linear optic provides a wide **batwing uplift** beam that spreads light to **145°**, delivering smooth, wide illumination without hotspots. With a **1200 mm length (±1 mm)**, it is purpose-built for elegant **suspended** and **free-standing luminaires** where visual comfort and uniformity matter.

Application examples:

- Office (suspended luminaires, free standing luminaires)
- Architectural lighting
- Hospitality lighting
- Retail lighting (Refrigerators, freezers)

# FIDIS - Wall Grazer

COMING SOON

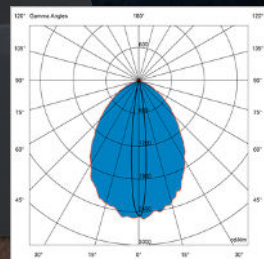

## Narrow beam wall grazer (12° x 75°)

This ultra-low linear profile, **22 mm** wide x 6.07 mm high x 1200 mm long, delivers a **tight, narrow beam** engineered for crisp **wall grazing**, revealing texture, materials and architectural rhythm with striking contrast and control. FIDIS integrates seamlessly into façades, corridors, galleries, and feature walls where light becomes a design tool.

### Application examples:

- Hospitality (Office corridors, hotel lobbies, reception areas)
- Architectural (Museums, Art galleries, show room)
- Accent lighting

# SPICA & FIDIS

## Application guide

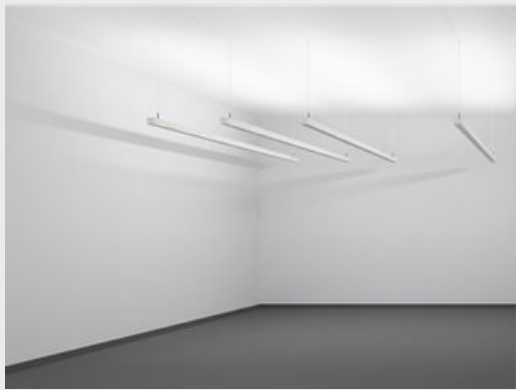

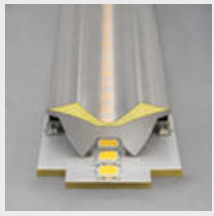

**Pitch-free optics** for a smooth, continuous line of light.

**SPICA:** designed for **20 mm PCBs** with **connectors at the end of the PCBs**.

**FIDIS:** compatible with **standard 20 mm Zhaga linear PCBs**.

We recommend to install FIDIS as close to the wall as possible.

**Flexible sourcing:** PCB designs are available, allowing you to manufacture your own PCB or select a **ready-to-use Stilec module**.
